**Abstract.** When a theory, as the general relativity, linked to special relativity, is foundation of a scientific paradigm, through academy, scientifics, professionals, professors, students and journals of that scientific community, indoctrinated in this paradigm, and the normal science, the paradigm, it self-sustains and reproduces. Thus, the research is obligated and limited to apply the model existent of the paradigm to formulate problems and solve them, without search new discoveries. This self-protection of the paradigm causes it ends its cycle of life, only after a long time, until that arise unresolved anomalies, some presents since origin, that finally cause its break and the profound change by other new paradigm. Here, we present, the complex, structural anomaly of the current relativistic paradigm based in metaphysical spacetime, and in that metaphysics replaces physics, due to that general relativity explains gravity caused by curvature, simple geometric property, of this metaphysical spacetime. Also, two internal anomalies directly its consequences. These are: matter-energy curves metaphysical spacetime, and metaphysical spacetime determines the geodesic motion of matter-energy. Our goal is initiate the call period of transition that is previous to scientific revolution.
